

## Online and Hard Copy Risk Assessment - Trucks

### Background

*Safe Driving Plus – Trucks* is an interactive risk reduction system for truck drivers, designed to change behaviour and reduce accidents and injuries. *Safe Driving Plus – Trucks* provides each individual driver with the information they need to stay safe and a personal action plan to reduce their risks.

Our assessments will allow you to take a pro-active stance in addressing the needs of all your truck drivers, instead of reacting to incidents when it is too late.

### Objectives

- To cover your company's Duty of Care to your employees by providing a safe and healthy working environment.
- To identify the risks to which your truck drivers are exposed and provide relevant and appropriate training.
- To help your company improve fleet risk and thereby reduce associated costs.
- To help your company with your legal risk assessment requirements and ensure you comply with the latest legislation.

### Topics

The Risk Assessment module includes:

- Driver risk.
- Journey risk.
- Vehicle risk.
- Vehicle maintenance.
- Driving comfortably.
- Driver behaviour questionnaire.

The subsequent User Action Report will identify a driver's weaker areas and will ask them to commit to improve such areas in the future. For example, within the User Action Report, driver's will be given appropriate 'Best Practice Feedback'. They will have the opportunity to commit to take on board and implement such feedback to questions like "When your vehicle is loaded to its maximum capacity, how would you vary your driving whilst braking or cornering?".

Having completed the risk assessment, depending on risk, drivers can then continue to the e-learning modules or be put forward for practical on-road training.

### Duration

These online assessments only take about 10 minutes to complete. For those without internet access, Catlin provide a hard copy format, to be transferred onto the online system in order to gain the full benefit of Management Information.
